MACHINE TEST - 1

LUMINAR TECHNOLAB

Time Duration: 2 Hours
Total Marks: 50

Cake Gallery

Objective:
Build a Cake Gallery application that fetches and displays cakes using a public API and allows users to save favorite cakes using localStorage.

API: https://www.themealdb.com/api/json/v1/1/filter.php?c=Dessert
(This API returns dessert meals with name and image.)

Requirements

1. Display Cakes
Fetch cakes from the API and display them dynamically in card format using DOM manipulation.
Each cake card should display:
Cake Image (strMealThumb), Cake Name (strMeal), Action button (Add to Favorites)

2. Add to Favorites (localStorage)
Add an Add to Favorites button for each cake. On clicking, store that cake in localStorage.
Prevent duplicate addition of the same cake.

3. Display Favorites Section
Show favorite cakes in a separate Favorites section. Favorites must remain visible after page refresh.
Each favorite should display: Cake Image, Name, Remove button.

4. Remove from Favorites
Provide a Remove button for each favorite cake. On click, delete from localStorage.
Update the DOM instantly.

5. Search Cakes
- Add a search box to search cakes by name.
- Filtering should update displayed cakes dynamically.
